

中 3 英語 サンシャイン Program8-3 本文

Have you ever heard of a wave power plant?

It produces energy from ocean waves.

Wave power can be a good energy source for Japan because Japan is surrounded by the sea.

There are some geothermal power plants near hot spring resorts or volcanoes.

Deep in the ground around there, there is heat we can use to produce electricity.

This heat will be used more because we have a lot of volcanoes in Japan.
